Principal Product Manager for AI platforms, LLM products and agent systems

Has taken AI platforms and LLM products from conception to launch at enterprise scale. At National Grid, launched an internal generative AI platform (an LLM with RAG) to 3,000+ monthly active users and grew a new cloud services platform from $2M to $20M+ in annual chargeback revenue. At Siemens, built Spark AI, a 120+ agent platform, and took active adoption from 3% to 65% in 10 weeks. Builds hands-on: a multi-agent system in production since November 2025 and mcp-judge, an open-source LLM-as-judge for evals. Started as a full-stack developer and shipped production ML for Pfizer and GM at Deloitte.

EXPERIENCE

Founder & Managing Director, Product Lead | BYU AI Foundry 2026 - Present

An applied-AI product studio inside BYU's Marriott School

- Won 8 client engagements, from local startups to BCG X, and trained all 30 builders in the studio
- Own product strategy across the studio's portfolio: shipped 4 production AI products with student teams, including a HIPAA-architected care-coordination platform (RBAC, encryption, PHI audit logging) onboarding its first skilled-nursing facilities of 100+ residents each

AI Product Strategist, XPS Program | Siemens Summer 2026

- Built and launched Spark AI, a custom AI platform of 120+ agents and 50+ skills, for 1,000+ Siemens US employees across all major job functions and seniority levels
- Drove active adoption from a 3% baseline to 65% in 10 weeks, with 650+ employees actively using it by close

Principal Product Manager | National Grid 2022 - 2025

- Designed and launched an internal generative AI platform to 3,000+ monthly active users, integrating an LLM (GPT) with proprietary documentation through RAG so engineers and support teams resolved issues faster
- Convinced 7 business-unit presidents to fund a new enterprise cloud services platform, then grew it from $2M to $20M+ in annual chargeback revenue with full P&L ownership
- Built an Infrastructure as Code (IaC) service that cut cloud service deployment from weeks to minutes and standardized 100+ enterprise tools (AKS, Snowflake, Power BI) with no separate security review per team
- Owned the strategic cloud and AI/ML roadmap, prototyping AI systems alongside engineers and driving cross-organizational collaboration; communicated technical strategy and business value to the C-suite
- Founded Cloud Leadership Sync, an executive and Chief Architect-level cross-BU forum, and introduced portfolio-level roadmapping, PRDs, and agile ceremonies across all business units
- Led implementation of security-first DevSecOps practices across the AI and cloud infrastructure stack, integrating secure deployment workflows and compliance monitoring
- Scaled the cloud and data organization from 5 to 35 engineers, establishing technical hiring, architecture standards, and delivery processes
- Expanded team from 1 to 4 pods; hired and developed 4 product managers, 2 promoted to senior within 12 months
- Promoted from Technical to Senior to Principal Product Manager in 18 months

Machine Learning Consultant | Deloitte 2020 - 2022

- Pfizer: Managed the development of an ML-integrated contact-center product during COVID-19, automating response generation so average queue time fell from 75 minutes to 15
- General Motors: Designed and deployed a clustering algorithm (unsupervised ML) to prune low-value configurations, saving $17.5M
- Walmart: Led data migration to SAP S/4HANA; designed data architecture for scalable analytics operations
- Served as the customer-facing technical lead on Fortune 100 consulting engagements (GM, Pfizer, Walmart), running discovery and solution design through year-long enterprise buying cycles
- Promoted to senior in year one, top 5% of the new-hire class

Senior Full-Stack Developer / Product Owner | Brio Energy 2018 - 2020

- Built a custom CRM for the solar sales division from scratch, improving efficiency between accounting and sales from a 5-day turnaround to 15 minutes
- Launched a new marketing website that generated 175+ qualified leads per week, contributing to $3.9M in annual new revenue across the sales organization
- Designed and deployed backend microservices that reduced accounting department spend by $745K annually, measured against the prior-year run rate
- Led a team of 5 developers, providing mentorship and technical guidance, resulting in 2 team member promotions

Full-Stack Developer | Surge Software 2017 - 2018

- Built 27 landing pages that generated 17M website visits and increased conversions by 21%
- Launched 12 APIs in 3.5 months that increased leads by 17%, powering the company's Dashboard UI and internal service architecture
- Mentored 4 junior developers who were promoted to senior positions through consistent coaching and code review practices

AI PRODUCTION SYSTEMS

Built Nerve Center, a production multi-agent system running since November 2025: a Claude Opus orchestrator routing to 30+ agents in daily production (100+ built over time), with domain agents scoped by function and data boundary, each with its own access and permission model; a durable inter-agent messaging bus (Supabase-backed, with dead-letter, retry and alerts); self-healing infrastructure with integrity guards every 15 minutes; and a real-time web cockpit with an audit trail across all agents.

Built on the Anthropic API across 180+ production repositories, and designed to adopt new model capabilities without rebuilding the deployment layer. Runs evaluation loops on it: failure classification by agent type, cohort-level performance tracking, and routing adjustments driven by observed degradation patterns.

Built and open-sourced mcp-judge, a calibrated multi-persona LLM-as-judge exposed as an MCP server with the eval harness that proves its calibration, and used it as the release gate on the AI Foundry's shipped AI products; also open-sourced claude-deploy-kit (enterprise agent controls).

EDUCATION

Brigham Young University, Marriott School of Business 2025 - 2027
MBA Candidate
Strategy & Product Management focus; President of the Product Management Association

Georgia Institute of Technology 2020 - 2022
Graduate Coursework, Data Science (OMSA)

Brigham Young University 2015 - 2020
B.S., Information Systems

TECHNICAL SKILLS

AI/ML: LLMs, multi-agent orchestration, agentic workflow design, RAG system design, evals, prompt engineering, ML (NLP, clustering), data science, enterprise AI deployment, Claude API, MCP

Cloud and Data: Azure (AKS), AWS, GCP, Snowflake, Power BI, Supabase, PostgreSQL, SQL, Excel, Infrastructure as Code, data engineering

Development: Python, TypeScript, React, full-stack development, REST APIs

Product: 0-to-1 products, product roadmaps, product requirements documents (PRDs), OKRs, agile at scale, stakeholder alignment without authority, executive communication, cross-functional discovery, AI product strategy, enterprise AI adoption
