JD DAVENPORT

me@jddavenport.com | 801-694-7791 | Provo, UT | linkedin.com/in/jd-davenport | github.com/jddavenportOpen | jddavenport.com

Product manager who takes AI platforms and LLM products from conception to launch and gets them adopted at enterprise scale. At National Grid, launched an internal generative AI platform to 3,000+ monthly active users and grew digital services revenue from $2M to $20M+ annualized. At Siemens, built Spark AI, a 120+ agent platform, and took active adoption from 3% to 65% in 10 weeks. Builds agent systems and evals hands-on, including a multi-agent OS in production since November 2025 and used across 180+ production repositories. Former full-stack developer who works across engineering, data science, and business leaders up to the C-suite.

EXPERIENCE

Founder & Managing Director, Product Lead | BYU AI Foundry 2026 - Present

- Founded AI product-building program inside BYU Marriott School of Business - identified market gap, built business case, secured faculty sponsorship and institutional backing, designed curriculum and cohort selection model from scratch, recruited and launched 30-builder founding cohort; accepted into Anthropic's Claude Partner Network
- Shipped 20 production applications, including a care-coordination platform built to HIPAA requirements
- Signed 18 paying clients, from local startups to BCG X, and trained all 30 builders in the studio
- Built and open-sourced mcp-judge, a calibrated multi-persona LLM-as-judge shipped with the eval harness that demonstrates its calibration, and used it as the release gate on the studio's shipped AI products

AI Product Strategist, XPS Program | Siemens Summer 2026

- Built and launched Spark AI - custom AI platform for Siemens US comprising 120+ custom agents and 50+ custom skills, deployed across 1,000+ employees spanning all major job functions and seniority levels
- Drove 65% active adoption from a 3% baseline in 10 weeks - 650+ employees actively using by close; enterprise AI rollouts at comparable industrial companies typically take quarters and rarely exceed 30%
- Designed and presented 3/6/12-month AI transformation roadmap to Siemens US leadership - sequenced by function-specific readiness, dependency-mapped, with role-specialized success metrics tied to measurable workflow efficiency outcomes

Principal Product Manager | National Grid 2022 - 2025

20,000-person Fortune 500 utility company

- Designed and launched an internal generative AI platform to 3,000+ monthly active users, integrating an LLM (GPT) with proprietary documentation through RAG so engineers and support teams resolved issues faster
- Built and deployed Infrastructure as Code (IaC) service reducing cloud service deployment from weeks to minutes; standardized 100+ enterprise tools (AKS, Snowflake, Power BI) across all BUs with no separate procurement or security review per team
- Founded Cloud Leadership Sync - first executive and Chief Architect-level cross-BU coordination forum in company history; introduced portfolio-level roadmapping, PRDs, and agile ceremonies at scale across all business units, structurally transforming a siloed engineering organization into a product organization
- Ran individual stakeholder campaigns convincing every BU President and Chief Architect to cede infrastructure autonomy - pitched Presidents on engineering tax elimination, Chief Architects on production-grade tooling with zero security review burden
- Owned the strategic cloud and AI/ML roadmap, prototyping AI systems alongside engineers, communicating technical strategy and business value to the C-suite, and driving cross-organizational collaboration to translate it into executable engineering plans
- Converted skeptical data science team from "product management is overhead" to "product management is why our models get used" - through embedded discovery and their own data, not authority
- Scaled engineering organization from 5 to 35 engineers; drove digital services revenue from $2M to $20M+ annualized
- Expanded team from 1 to 4 pods; hired and developed 4 product managers, 2 promoted to senior within 12 months
- Promoted from Technical to Senior to Principal Product Manager

Machine Learning Consultant | Deloitte 2020 - 2022

- Delivered strategy consulting engagements for Fortune 100 clients (GM, Pfizer, Walmart); synthesized market research, competitive analysis, and operational data into actionable recommendations
- Pfizer: Managed the development of an ML-integrated contact-center product during COVID-19, automating response generation so average queue time fell from 75 minutes to 15
- General Motors: Designed and deployed a clustering algorithm (unsupervised ML) to prune low-value configurations, saving $17.5M
- Walmart: Led data migration to SAP S/4HANA; designed data architecture for scalable analytics operations
- Promoted to senior in year one, top 5% of the new-hire class

Senior Full-Stack Developer / Product Owner | Brio Energy 2018 - 2020

- Built a custom CRM for the solar sales division from scratch, improving efficiency between accounting and sales from a 5-day turnaround to 15 minutes
- Launched a new marketing website that generated 175+ qualified leads per week, contributing to $3.9M in annual new revenue across the sales organization
- Designed and deployed backend microservices that reduced accounting department spend by $745K annually, measured against the prior-year run rate

Full-Stack Developer | Surge Software 2017 - 2018

- Built 27 landing pages that generated 17M website visits and increased conversions by 21%
- Launched 12 APIs in 3.5 months that increased leads by 17%, powering the company's Dashboard UI and internal service architecture

AI PRODUCTION SYSTEMS

Built Nerve Center - a production multi-agent system running since November 2025: an orchestrator model (Claude Opus) routing to 10+ domain-isolated agents (each scoped by function and data boundary, with differentiated access and permission models), a durable inter-agent messaging bus (Supabase-backed, dead-letter/retry/alerts), self-healing infrastructure with integrity guards every 15 minutes, and a real-time web cockpit with audit trail across all agents. Backed by Anthropic API across 180+ production repositories. Architecture designed to adopt new model capabilities without rebuilding the deployment layer.

Operational knowledge of LLM failure modes in production (Claude) that documentation doesn't cover: context window degradation curves, multi-agent state divergence patterns, prompting architecture differences across agent-loop vs. single-turn vs. long-running contexts. Working implementation of AI evaluation loops: cohort-level performance tracking, failure classification by agent type, and routing adjustments driven by observed degradation patterns.

EDUCATION

Brigham Young University, Marriott School of Business 2025 - 2027

MBA Candidate

Strategy & Product Management focus; President of the Product Management Association

One class from completion

Georgia Institute of Technology 2020 - 2022

Graduate Coursework, Data Science (OMSA)

Brigham Young University 2015 - 2020

B.S. Management Information Systems

TECHNICAL SKILLS

AI/ML: LLMs, multi-agent orchestration, agentic workflow design, RAG system design, evals, prompt engineering, ML (NLP, clustering), enterprise AI deployment, Claude API, MCP

Cloud and Data: Azure (AKS), AWS, GCP, Snowflake, Power BI, Supabase, PostgreSQL, SQL, Infrastructure as Code, data engineering

Development: Python, TypeScript, full-stack development, REST APIs

Product: 0-to-1 products, product roadmaps, product requirements documents (PRDs), OKRs, agile at scale, stakeholder alignment without authority, cross-functional discovery, AI product strategy, enterprise AI adoption
